

HURST POWER. BUILT FOR RESCUE.

Purpose-built batteries that deliver rescue-grade performance when the call comes.

Not all batteries are created equal. HURST batteries are designed for one environment: the rescue scene. While off-the-shelf systems were made for job sites and garages, ours are engineered for the realities of rescue: extreme heat, moisture, vibration, and water.

What sets HURST batteries apart:

- **Consistent, high-current power** through demanding extrications
- **Ruggedized housing** with sealed, reinforced construction
- **IP68 rating** for full protection against water and debris
- **Integrated design** means the battery and tool perform as one system
- **Smart diagnostics** that predict maintenance needs before failure

Because when seconds count, power isn't about convenience.
It's about confidence.

Why It Matters for Your Department

- Longer runtime = fewer interruptions during critical operations
- Simplified maintenance = reduced downtime and fewer service calls
- Unified warranty = one source of accountability and support
- Designed and tested by HURST = the brand crews trust

#PowerToGo
Rescue Ready.
