OVER 130 YEARS OF INNOVATION

Globe invented turnout gear over 130 years ago. Today we still deliver the most advanced, best-fitting, and longest-lasting protection by listening to our customers, creating breakthrough designs, and applying the engineering skills of the nation's most trusted manufacturer.

Our employees and our distributors all share a passion for building "Athletic Gear for Firefighters" in their specified styles, materials, and options. And no matter what challenges tomorrow's firefighters face, they can be sure that Globe will continue to be there to protect them.

1887

Globe Manufacturing Company is founded in Lynn, MA. Courtland F.H. Freese buys the company and moves it to Pittsfield, NH, which remains its headquarters to this day.

1918

Globe receives a patent for a waterproof coat using an outer shell, a waterproof barrier, and a thermal lining — the same system still used today by all manufacturers of turnout gear.

1953

Globe is the first to use 3M™ Scotchlite™ reflective trim to add visibility to its turnout gear.

1966

Globe introduces DuPont NOMEX® inherently flame-resistant fabric.

1975

Globe is a charter member of the National Fire Protection Association, creating the first NFPA 1971 Standard for Protective Clothing for Structural Fire Fighting. Globe becomes the first to comply with this new standard for every turnout sold.

1985

Globe introduces two state-of-the-art performance fabrics: PBI® for outer shells and waterproof, breathable Gore-Tex® fabric for moisture barriers.

1991

Globe brings ergonomic design to turnout gear by launching the revolutionary GX-7™, which rapidly becomes the most popular turnout gear in the fire service.

1993

The fourth generation of the founding Freese family takes over the ownership and management of Globe. Gef (left), Rob (middle), and Don (right).

1994

Globe is the first manufacturer of turnouts to achieve ISO 9001 Certification.

1995

Globe acquires Cairns Protective Clothing.

EXPOSURE REDUCTION SYSTEM

GLOBE GUARD™ SYSTEM

The Globe Guard™ System, in combination with the most innovative turnout gear from MSA Safety, helps to reduce exposure to toxic substances without impeding performance. MSA is committed to delivering premium performance solutions and supporting scientific research to help address long-term firefighter health and safety. Continually improving turnout gear specifications is one of the many steps necessary for departments to help reduce exposure to toxic substances for their members.

OTHER TURNOUT GEAR CONSIDERATIONS

- On the jacket, a front closure with a zipper inside and hook and loop outside is recommended to help reduce exposure when properly secured.
- On the pants, the addition of the inside gusset helps to reduce exposure when the hook and loop fly closure is properly closed.
- At the jacket and glove interface, elasticized, adjustable sleeve wells constructed of GORE-TEX CROSSTECH® Innovate Moisture Barrier or GORE-TEX CROSSTECH® Black Moisture Barrier with wristers sewn to the liner is recommended to help keep toxic substances from entering the sleeves when the arms are raised.
- The Globe Guard™ Jacket and Pant components are also available with Neoprene.

GLOBE GUARD™ JACKET COMPONENT

Sewn into the thermal liner above the hemline and constructed of two layers – GORE-TEX CROSSTECH® Innovate Moisture Barrier or GORE-TEX CROSSTECH® Black Moisture Barrier and TECASAFE® PLUS for moisture management, high breathability, flame resistance, and active moisture wicking – to help reduce exposure at the jacket and pants interface. The Globe Guard™ Jacket Component is automatically engaged as part of the liner system when the jacket closures are secured.

GLOBE GUARD™ PANT CUFF COMPONENT

Constructed of two layers – GORE-TEX CROSSTECH® Innovate Moisture Barrier or GORE-TEX CROSSTECH® Black Moisture Barrier and TECASAFE® PLUS – and sewn to the liner system at the bottom hem of each leg to help reduce exposure at the pant cuff and boot interface.

GLOBE GUARD™ PANT FLY COMPONENT

Constructed of two layers – GORE-TEX CROSSTECH® Innovate Moisture Barrier or GORE-TEX CROSSTECH® Black Moisture Barrier and TECASAFE® PLUS for moisture management, high breathability, flame resistance, and active moisture wicking – and installed at the base of the fly to help reduce exposure.
